

CRMS Status Codes for Reviews

(Last Updated: March 10, 2011)

- Status **0** - has not been reviewed, or has been reviewed by one or two reviewers (**New or Advanced**) and awaits processing.
- Status **1** - a legacy review that has been reviewed by only one reviewer.
- Status **2** - has been reviewed by two reviewers (**New or Advanced**) and they disagree. This constitutes a conflict that requires an **Expert** reviewer's decision.
- Status **3** - has been reviewed by two **New** reviewers and they agree. This constitutes a provisional match that requires an **Expert** reviewer's decision.
- Status **4** - has been reviewed by either two **Advanced** reviewers or one **New** and one **Advanced** reviewer and they agree. This match constitutes a final determination.
- Status **5** - covers several possible scenarios and in all cases, constitutes final determination:
 - ♦ volume reviewed by an **Expert** reviewer only
 - ♦ legacy re-review of an original legacy review
 - ♦ **Expert** review that resolves 2 conflicting reviews
 - ♦ **Expert** review that overrides two matching provisional reviews (starting 6/2010)
 - ♦ **Expert** review that overrides two matching undetermined reviews (prior to 4/19/2010)
- Status **6** - a group of 3 matching undetermined reviews – two by reviewers and a third by an **Expert** who agreed with the two reviewers. This constitutes a final determination (no longer in use as of 4/19/2010).
- Status **7** - a provisional match (see Status 3) that has either been accepted (creating a “dummy review”) or reviewed separately by an **Expert** who agrees with the provisional match. This constitutes a final determination.
- **Status 8** - two “conflicting” reviews submitted by non-expert reviewers that are resolved via a system-generated final review based on pre-determined rules (see System Generated Reviews document for details). This constitutes a final determination.
- **Status 9** - review that is automatically generated when rights are inherited from determination(s) submitted for duplicate volume(s). This constitutes a final determination.
