System Generated Reviews

(Last Updated: March 3, 2011)

This document describes the CRMS internal resolution policy for automatically generated reviews.

Conflicting Reviews/Status 8: two "conflicting" reviews submitted by non-expert reviewers– system generated review becomes final determination

Nature of "Conflict"	System Generated (Final) Determination	Note Category	Note Text	Note Text Example
matching ic/ren reviews with non-matching renewal #s	ic/ren	Attr Match	Non-matching renewals: (renewal numbers & dates)	Non-matching renewals: RE091348 (12Feb81) vs R660041 (3Jan77)
matching ic reviews with different reason codes	ic/crms	Attr Match	N/A	
matching pd reviews with different reason codes	pd/crms	Attr Match	N/A	
ic review vs. und review	und/crms	Attr Default	N/A	

Duplicate copies/Status 9: rights inherited from determination(s) submitted for duplicate volume(s)

Note category will always be "Rights Inherited" to assign rights determination automatically for duplicate volumes that already in or are subsequently added to the repository. For our purposes, "duplicate volume" is theoretically an identical volume attached (as holdings) to the same bibliographic record with no chron/enum information included (i.e., not part of multi-volume work).

Note – for all system-generated reviews:
Legacy = 0   User = autocrms   Verdict = 1   Swiss = 0
